

How to Keep Your Alarm System at Peak Performance

Test your alarm system on a regular basis. We recommend that you test it weekly.

Proper test procedures can be found in your user guide or you may call our support line to get instructions.

Please make sure that you call our support line to schedule the test, so that our central monitoring station knows that you are running a test.

Make sure that you schedule our service technicians to come and clean all sensors and detectors on a regular basis.

Change all batteries used in your system at least once per year.
